DNA Of NLP Lisa Christine Christiansen

Your cells can choose to read or not read the genetic blueprint depending on the signals being received from the environment. You are controlled by your genetic readout, it is primarily determined by your thoughts, attitudes, and perceptions. Your thoughts shape your environment far more than physical matter. Scientists Prove DNA Can Be Reprogrammed by Words and Frequencies. THE human DNA is a biological Phenomenon, the mind's influence on every detail of your life patterns in success, health and wealth is astonishing. In addition, there is evidence for a whole new type of medicine in which DNA can be influenced and reprogrammed by words and frequencies WITHOUT cutting out and replacing single genes. One can simply use words and sentences of the human language. This, too, was experimentally proven! Living DNA substance (in living tissue, not in vitro) will always react to language and even to radio waves, if the proper frequencies are being used. This finally and scientifically explains why affirmations, autogenous training, hypnosis and the like can have such strong effects on humans and their bodies. It is entirely normal and natural for our DNA to react to language. While western researchers cut single genes from the DNA strands and insert them elsewhere, the Russians enthusiastically worked on devices that can influence the cellular metabolism through suitable modulated radio and light frequencies and thus repair genetic defects. And so begins the DNA of NLP for programming your new success blueprint.
