**Arduino Networking** Marco Schwartz

**Connect your projects to the Web using the Arduino Ethernet library**

## About This Book

- Learn to use the Arduino Ethernet shield and Ethernet library
- Control the Arduino projects from your computer using the Arduino Ethernet
- This is a step-by-step guide to creating Internet of Things projects using the Arduino Ethernet shield

## Who This Book Is For

This book is intended for those who want to build their own network-connected projects using the Arduino platform. You will be able to build exciting projects that connect to your local network and the Web. You will need to have some basic experience in electronics and web programming languages. You will also need to know the basics of the Arduino platform as the projects mainly deal with the networking aspects of the Arduino Ethernet shield.

## What You Will Learn

- Interface the Ethernet shield with Arduino and to your Ethernet router
- Learn the basics of the Arduino Ethernet library
- Grab the content of a web page using the Ethernet shield
- Measure data and send it to a server running on your computer
- Create a data logging station with a web server running on the Ethernet shield
- Send measured data to the cloud service Xively, so it can be monitored from anywhere
- Discover how to use the Temboo web service to connect the Ethernet shield to more cloud services

## In Detail

Arduino is a powerful electronic prototyping platform used by over one million people around the world. The Arduino Ethernet shield is the perfect addition to the Arduino platform to get it connected to your local network and to the Web in minutes. This book covers several projects you can build using the Arduino Ethernet shield. These projects are organized in three parts. The first part of the book will cover the basics of the Ethernet shield and the Ethernet library, such as how to run an Ethernet client that sends data to a server on your computer. The second part will make the Arduino and Ethernet shield more independent by running a web server on the Arduino board. You will learn how to create, record, and visualize data using Xively service.

The last part of the book is dedicated to the topic of the Internet of Things, with projects that connect the Ethernet shield directly to the Web. You will also learn to create an account on Temboo to get access to a wide range of cloud services.

### **From reader reviews:**

#### **Linda Hupp:**

What do you think about book? It is just for students since they're still students or this for all people in the world, exactly what the best subject for that? Merely you can be answered for that concern above. Every person has distinct personality and hobby for every other. Don't to be compelled someone or something that they don't wish do that. You must know how great along with important the book Arduino Networking. All type of book would you see on many solutions. You can look for the internet resources or other social media.

#### **Jorge Wilson:**

The publication with title Arduino Networking has lot of information that you can understand it. You can get a lot of profit after read this book. That book exist new information the information that exist in this e-book represented the condition of the world today. That is important to yo7u to know how the improvement of the world. This specific book will bring you inside new era of the globalization. You can read the e-book on your own smart phone, so you can read the idea anywhere you want.

#### **Robert Price:**

Don't be worry for anyone who is afraid that this book will certainly filled the space in your house, you will get it in e-book technique, more simple and reachable. This particular Arduino Networking can give you a lot of close friends because by you taking a look at this one book you have factor that they don't and make an individual more like an interesting person. That book can be one of a step for you to get success. This reserve offer you information that maybe your friend doesn't recognize, by knowing more than some other make you to be great individuals. So , why hesitate? Let's have Arduino Networking.

#### **Frances Coffey:**

As we know that book is vital thing to add our expertise for everything. By a e-book we can know everything we wish. A book is a group of written, printed, illustrated or blank sheet. Every year ended up being exactly added. This book Arduino Networking was filled concerning science. Spend your time to add your knowledge about your research competence. Some people has diverse feel when they reading a book. If you know how big selling point of a book, you can feel enjoy to read a publication. In the modern era like today, many ways to get book that you wanted.
